

Service, Inspection & Repair

OCI: We'll help keep you up and running!

OCI has experienced service technicians to inspect, repair and service your equipment. We offer complete rebuilding services as well as non-destructive inspection for cracks and other deformities in the tooling that can occur over time.

OCI will inspect your current drill tooling from the head of the drill rig down to the hammer or bit you are using, including Kelly Bars.

OCI will give you a cost analysis so that you can determine if it is economical to repair or replace the tooling in question. We service most Down The Hole hammer brands and DKI WAI high pressure water hammers. We also repair and sharpen hammer bits to extend their life as much as possible.

OCI has a fully staffed service team and carries a full inventory of replacement parts and materials. We provide jobsite pickup and delivery with unmatched 24/7 turnaround to keep your project on schedule.
